

Round-1: Online test

Format: a) 7-8 technical MCQs

b) 2 coding questions

c) 1 SQL query

Round-2: There were 3 technical interviews(For the analyst role GD was the first round after the test and then rest all other rounds were same)

1. **T.I round-1:** Questions based on your resume and basic questions on python and their syntax. They might also ask you to write the syntax for a particular concept in Python. They ask questions based on the projects that you have built till date and questions on the tech stack used.
2. **T.I round-2:** Again your entire resume would be discussed in detail and advance questions based on your tech stack would be asked. Also puzzles and sql queries were given to solve on paper.
3. **T.I round-3:** This is the final round where they try to judge the character you are by asking situational questions, so you need to stay very calm and listen to the question very carefully. If you don't understand the question then ask the interviewer and clarify your doubt. Also remember, always ask some questions to the interviewer at the end of each interview round. That shows how keen you are to learn things.
